

COMETE

The COMETE range, mostly dedicated to the world of early childhood, nursery schools and kindergartens, has enriched its colour range with 6 new shades that will also find their place elegantly in office layouts and the waiting areas of health centres.

COMETE

Because at any age, the environment in which we evolve while growing up, playing, working, doing sports or on a care pathway must be healthy and pleasant....

COTTING presents the 6 new colours of COMETE which will find their place in these universes having for common denominator the well-being, the relaxation and to chill ...

We have chosen the term «chill» to designate a context of relaxation, tranquillity, a calm moment conducive to rest.

The colours of the COMETE range are part of this trend and invite you to take a break and regenerate.

The **orchidée** colour offers calm and sobriety, it invites calm and spirituality but not gloom! This deep and serious tone goes well with beige, ivory or pale grey.

Bambou brings elegance and harmony. This beneficial and soothing colour creates a comforting and restful atmosphere, precious and soft.

Guimauve, a soft, mellow and tender colour, is ideal for romantic, floral and soothing atmospheres.

Sable is a colour that is associated with uniformity and camouflage in nature. It is neutral and refined and invites harmony. In interior design, it allows for a great deal of fantasy because it matches all other colours.

Hygge is both an art of living and a feeling of well-being. A trend that originated in Denmark and which translates into a sum of small things in a cosy and comfortable interior. This soft grey tone invites comfort and cocooning.

Flave, a colour that belongs to the autumn colour chart, is a rare synonym for yellow, borrowed from the Latin «flavus» and used to describe bright, golden hair. Combined with all colours, this tone reveals the splendour of its warm and enveloping shades.

Technical characteristics

- **Fire norms**
M2 // EN 1021. 1-2
IMO A652 FTP 2010 / Wheelmark
NF EN 71-2 & 3
- Biocompatible (ISO 10993 part 5)
